Guidelines for Raising FAIR Adoption in Health Data and Health-related Research Performing Organisations (HRPOs)

The Challenge:

Health research data necessitates special provisions for handling and sharing due to their sensitive nature.

What is the solution?

The FAIR principles were borne from a need to better manage data, but may not be fully embraced by the health research performing community. However, FAIR is a continuum, and there are still actions that can be taken to allow better management of health research data and make them FAIR compliant, and in particular to make them reusable by third parties.
